

ESDIS

John Gainsborough

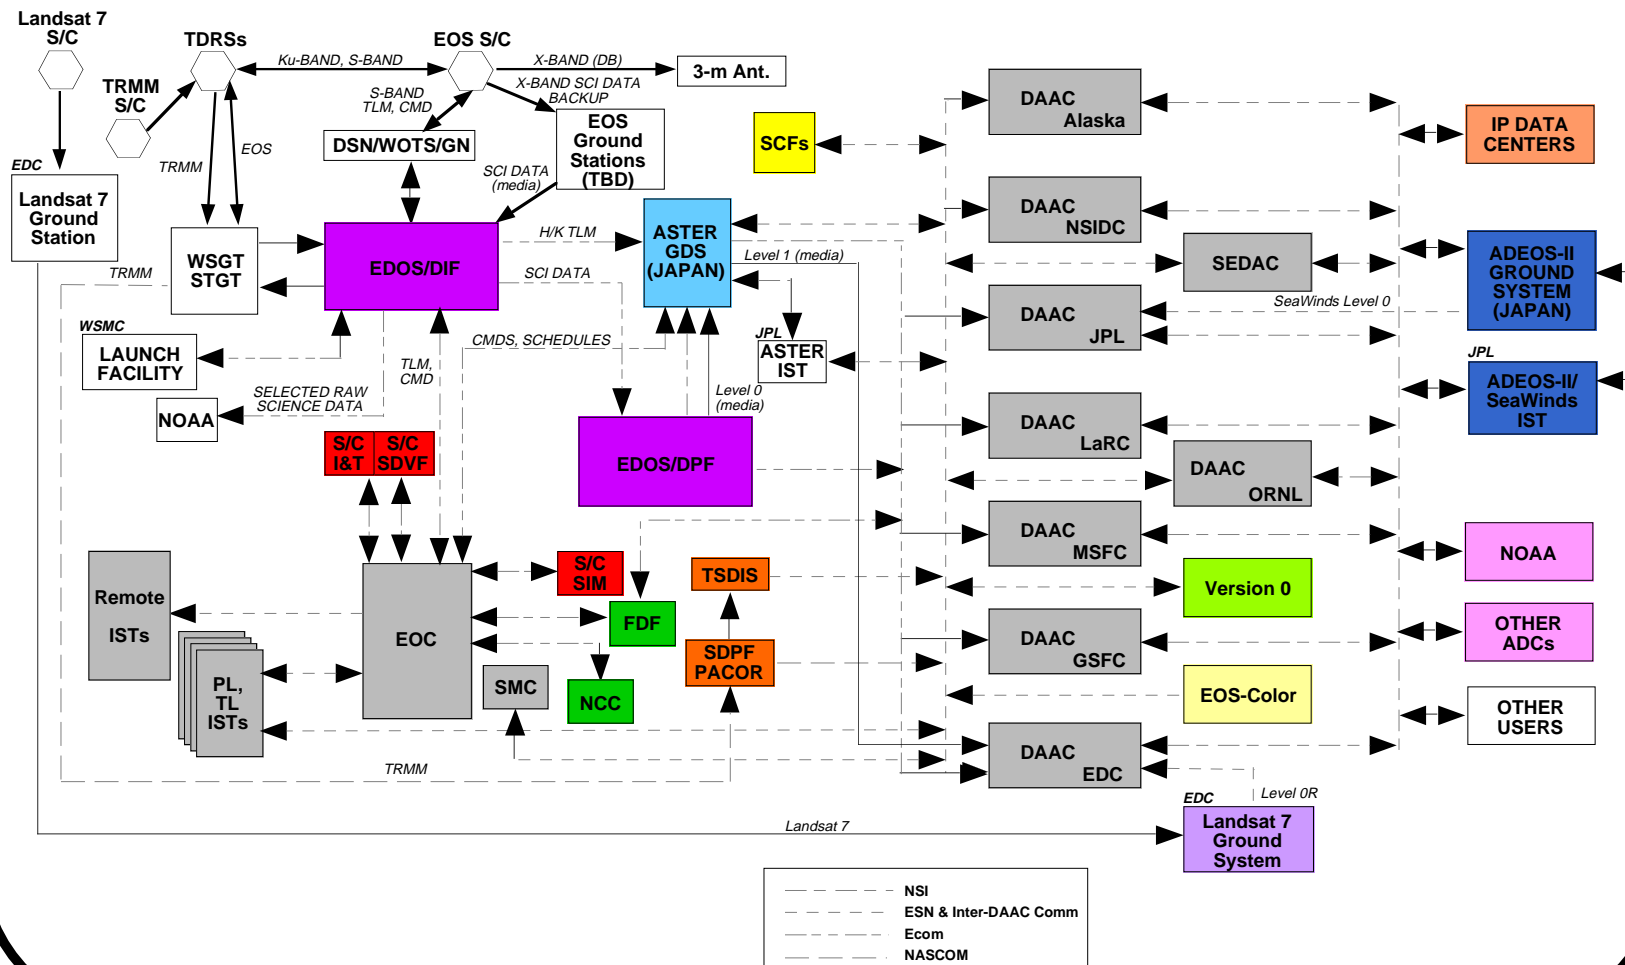

June 27, 1994

- **Agenda**
 - **EOSDIS System Context**
 - **Organizations**
 - « **Development, Integration, Operations, and Independent Verification & Validation (IVV)**
 - **Example Integration Dependencies**

ESDIS

Context Diagram

ESDIS

EOSDIS - System Context

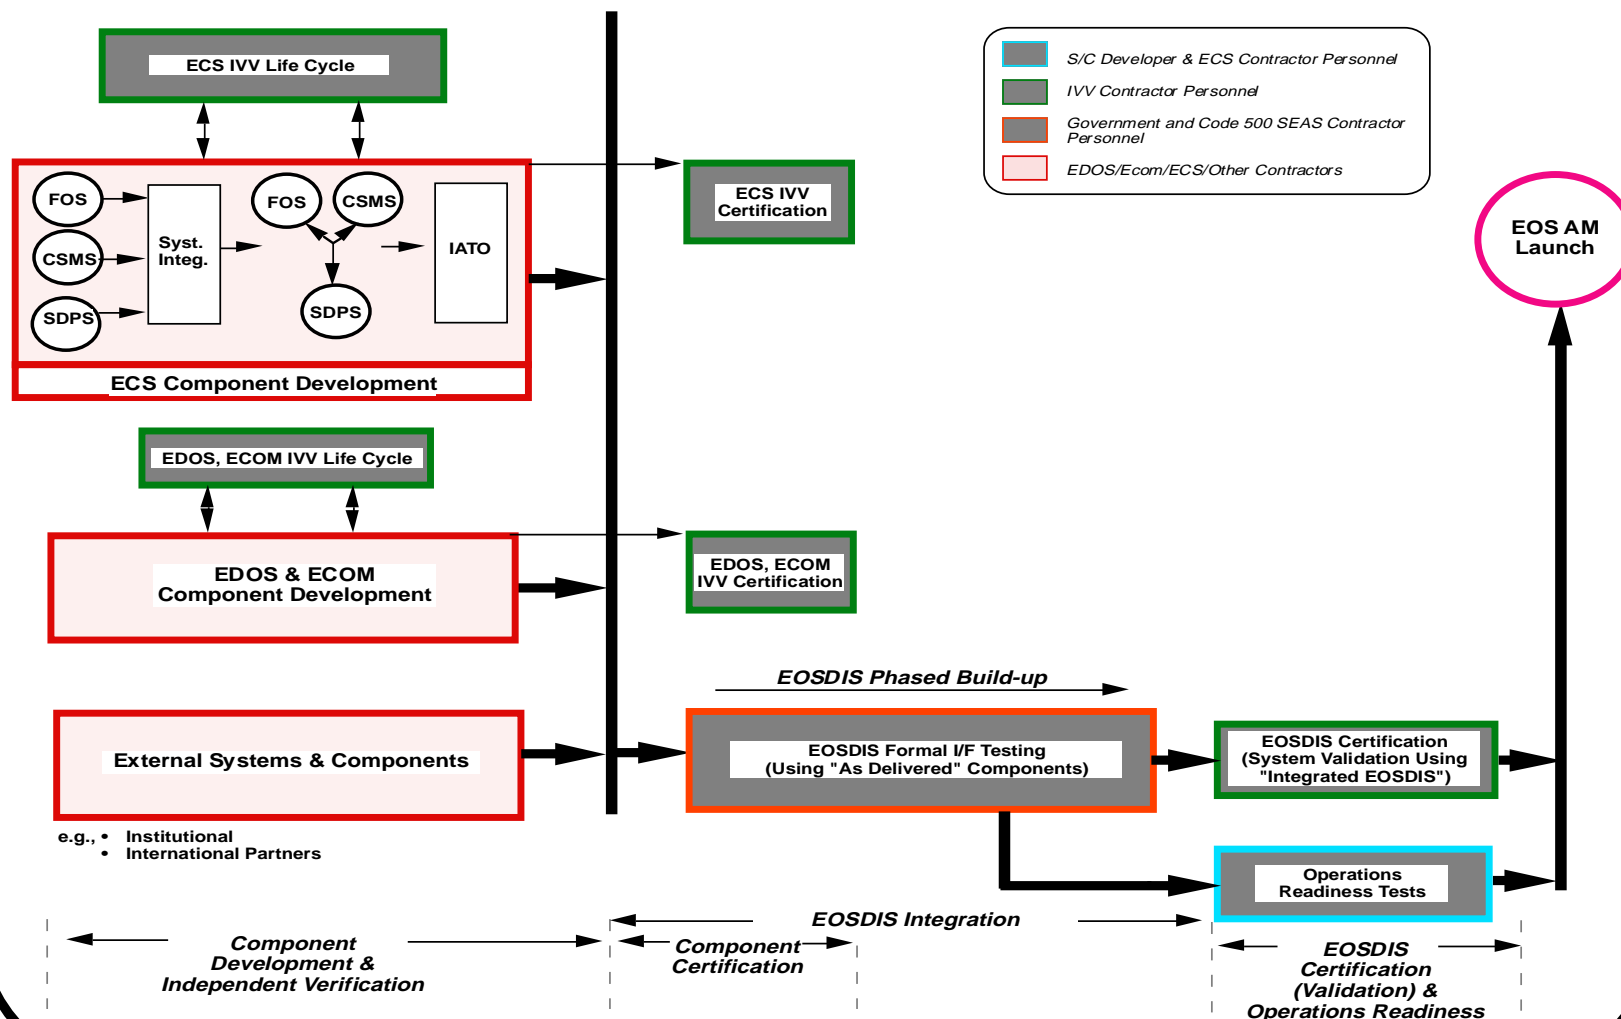

- **Many disparate system components:**
 - **New development:**
 - « **ECS and EDOS (External), Ecom (Internal)**
 - **International Partners**
 - « **MTI/NASDA, ESA, CSA**
 - **GSFC Institutional Systems**
 - « **Flight Dynamics Facility**
 - **EOS Flight Projects**
 - « **Spacecraft Systems, Mfg. Plant, Launch Facilities**
 - **Space Communication Systems**
 - « **TDRS/White Sands, Direct Broadcast, Backup**
 - **Non-EOS Flight Projects**
 - « **TRMM, Landsat-7, Color**
 - **Other Agencies**
 - « **NOAA**

- **Deliver a robust system that meets planned functionality and performance**
- **Ensure that the time-phased capabilities are scheduled to support mission and user needs**
- **Ready for mission simulations and system certification**

ESDIS

EOSDIS Development Integration & Test

6/24/94-E25

- **Component Integration and Test**
 - Levels 3 & 4 requirements
 - External interfaces ready for system integration
- **EOSDIS Integration and Test**
 - Levels 2 & 3 requirements
 - Key interface testing with “as built” components
 - Plan, coordinate, conduct, analyze, and report intercomponent and end-to-end tests
 - Prepare system for transfer to operations
- **Operations**
 - Flight, Science, and System
 - Perform prelaunch data flow and end-to-end tests
 - Perform mission simulations
 - Conduct operations training

- Independent Verification & Validation:
 - Independent
 - « Independent from the development organizations
 - Verification (Life Cycle IVV)
 - « *The interactive process of determining whether the products of a given phase of a system development cycle fulfill the requirements established during the previous phase*”
 - « Supports early detection/correction of errors, and early identification of potential problems and risks
 - « Ensure that requirements track across all levels
 - « Analyze and assesses processes, products, and results associated with all development phases (requirements, design, implementation, and test)

- **Independent Verification & Validation (Continued):**
 - **Validation (Component and System Certification)**
 - « *“The process of evaluating the “as built” system at the end of its development process to ensure compliance with system requirements and user needs”*
 - « **Independent assessment of the functionality and performance of individual component releases**
 - Performed through analysis, observation, and supplemental testing where needed
 - « **Define system certification criteria that are testable and assess the ability of EOSDIS to met these criteria**
 - Focus on user scenarios
 - DAACs review plans and support tests

ESDIS

TRMM/EOS GS Integration Dependencies

TRMM Launch

TRMM Key Int. Testing

TSDIS

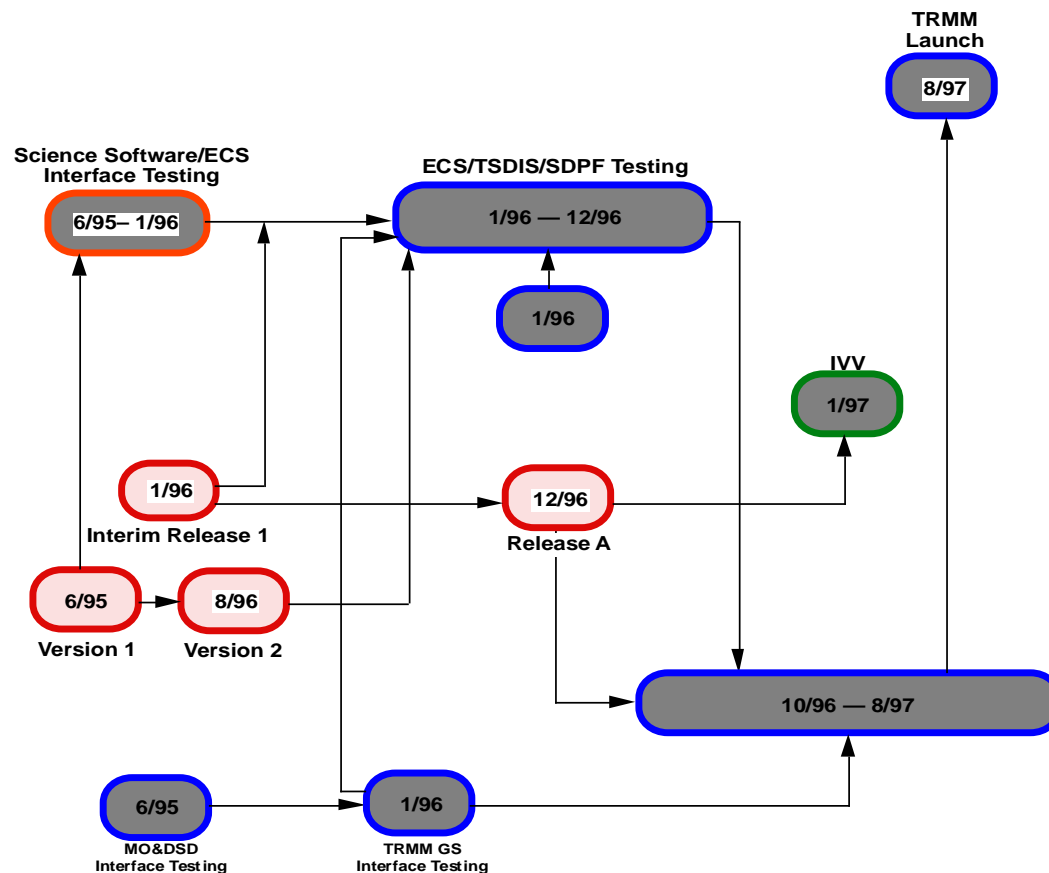

ECS IVV Testing

ECS
(Release A Supports TRMM
Full Capabilities.)

CERES, LIS Science SW

TRMM Sys. Testing

SDPF

 = Not under ESDIS Project control.
 EDOS/Ecom/ECS/Other Contractor
 IVV Contractor Personnel
 Government and Code 500 SEAS Contractor Personnel
